

Lab 03: Sentiment analysis paper

Abdelkrime Aries

In this lab, we will learn how to valorize our proposed method (Lab02) by writing a little paper. We have already a paper describing the method proposed in Lab01. Then, this paper must be adapted so it fits the description of the new method.

1 Possible modifications

You have to change

- the title
- the auteur
- the summary
- some parts of the method description
- some parts of the experiments
- the architecture's schema
- the conclusion

2 Recommendations

- You can use either use \LaTeX on your PC or Overleaf (Although this last does not compile big files anymore)
- You can use chatGPT to enhance your writing (reformulation, translation, etc.). But, do not use it for facts since it tends to generate erroneous information sometimes.
- You have to submit only the pdf and not the \LaTeX code
